PROFESSIONAL SUMMARY

QA & Software Automation Engineer with 3+ years of experience designing scalable test automation frameworks, REST & SOAP web services validation suites, and enterprise microservices. Specialized in Java (Selenium WebDriver), Python & C# (Playwright), BDD frameworks (Cucumber/Behave), and Azure cloud environments. Proven track record in parallelizing test pipelines to reduce execution runtime by 25%, conducting deep-dive log root-cause analysis in JIRA, and delivering resilient software quality in fast-paced engineering teams.

TECHNICAL SKILLS

Test Automation & BDD: Java, Selenium WebDriver, Playwright, Pytest, BDD (Cucumber / Behave), Framework Architecture, UI & Cross-Browser Testing

API & Web Services Testing: REST API Automation, SOAP Web Services, Postman, Contract Validation, JSON/XML Payload Verification

Languages & Databases: Java, Python, C#, JavaScript, React.js, ASP.NET Core, SQL, MSSQL, MongoDB

Cloud, DevOps & Virtualization: Azure (VMs, Pipelines), AWS, Docker, Kubernetes, Git, CI/CD Test Pipelines, Infrastructure Concepts

Quality & Engineering Practices: Test Strategy & Planning, Requirement Traceability (RTM), Root Cause Log Analysis, JIRA, Defect Lifecycle, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior QA Engineer | SafeSend Technologies

Feb 2023 – Present

- Created an **Test Case generation agent** using **LLM** to generate test cases from the requirements (User stories) and also generate the automation code for the same.
- Created an API to fetch the secrets in local machines as VMs are having Managed Identities.
- Architected and automated robust test suites using **Java (Selenium)** and **Python (Playwright)** to validate critical web application workflows and edge scenarios.
- Implemented parallel test execution workloads across **Azure VMs**, achieving a **25% reduction in total execution runtime** and accelerating release verification.
- Designed automated validation for **REST and SOAP web services**, executing payload structure, HTTP status, and API contract verification.
- Performed structured **log analysis and root-cause defect investigation** using **JIRA**, partnering with core developers to ensure rapid resolution of software defects.
- Maintained comprehensive test designs and **Requirement Traceability Matrices (RTM)** to ensure 100% test coverage against functional specifications.

Graduate Engineering Trainee | SafeSend Technologies

Jul 2022 – Feb 2023

- Engineered high-throughput **ASP.NET REST APIs** implementing **CQRS and SAGA** architectural patterns for modular backend processing.
- Integrated **BDD specifications (Cucumber/Behave)** to align business logic requirements directly with automated regression suites.
- Optimized MSSQL database performance via indexing strategies and query tuning, improving backend data retrieval speeds under heavy test loads.
- Migrated legacy monolithic MVC Razor pages to component-based **React.js** single-page interfaces, enhancing maintainability.

Front End Intern | Deloitte

May 2022 – Jul 2022

- Developed responsive front-end interfaces with **React.js** and reusable UI component libraries to standardize cross-team development.
- Executed cross-browser compatibility and UI validation checks to guarantee flawless rendering across major browser engines.

SELECTED ENGINEERING PROJECTS

Job Applier Agent

2025

- Use of various evasive techniques for bot detection avoidance.
- Automate Regular Task using playwright.
- Use LLM when the Automation is not able to perform for a new page or different format then store that and improve the automation
- Human Fallback when both fails or for verification before submission on telegram bot

Vanila JS HomePage

2020

- Offline first homepage for browsers
- store notes and displays Quotes(online only) + Time

EDUCATION

B.E., Computer Science Engineering — Sapthagiri College Of Engineering

2023
